SUMMARY

Full Stack Engineer with 5+ years of experience building scalable, production-grade applications using React, Angular, Java Spring Boot, Node.js, PostgreSQL, and AWS across healthcare and insurance domains. Contributed to enterprise automation initiatives that achieved up to 91% CPT code automation, improved claim turnaround time by 94%, and optimized high-volume systems through scalable frontend and backend engineering. Recently graduated with an MS in Computer Science (GPA: 3.93/4) from SUNY New Paltz, with experience building AI-powered applications using RAG and LLM-based workflows.

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, Angular, React, RxJS, NgRx, Redux

Backend: Java, Spring Boot, Node.js, Express.js, REST APIs, Microservices, Kafka, Hibernate, Data Structures and Algorithms

AI / LLM: OpenAI API, Ollama, Retrieval Augmented Generation (RAG), LangChain, Embeddings, Vector Databases (Weaviate)

Databases / Cloud: PostgreSQL, MongoDB, SQL, AWS, CI/CD, Git, Terraform, Docker, BPMN

WORK EXPERIENCE

State University of New York at New Paltz

Teaching & Research Assistant

New Paltz, NY

Aug 2025 – May 2026

- Engineered an AI-powered Student Advisor Application using React, Node.js, LangChain, and Retrieval Augmented Generation (RAG), reducing course recommendation time by 75% and minimizing manual advising errors by 80%.
- Built backend retrieval pipelines that processed academic transcripts, generated embeddings, and retrieved contextually relevant curriculum data from Weaviate vector databases to reduce hallucinations and improve response reliability.
- Developed a conversational interface using OpenAI APIs and Ollama LLMs, enabling professors and students to query course eligibility through natural language interactions.

Athenahealth

Senior Software Engineer, Full Stack Developer

Chennai, India

Feb 2022 – Dec 2024

- Developed scalable user-facing healthcare applications and backend services using React, Node.js, Java Spring Boot, REST APIs, and MongoDB for hospital claims processing workflows.
- Built and integrated microservices-based IAG-Engine automation workflows, increasing CPT code automation and claim resolution rates by 91% while improving turnaround time by 94%.
- Implemented rule-driven API integrations to auto-populate patient questionnaires and generate CPT recommendations from structured medical records, reducing manual intervention for coders.
- Architected auditor feedback and validation workflows that improved coding accuracy, enabled maintainable review pipelines, and reduced operational processing delays.
- Collaborated closely with engineers, product teams, and stakeholders during Agile delivery cycles while providing on-call production support for critical applications.
- Contributed to CI/CD pipelines automating build, testing, and deployment workflows, improving release reliability and reducing deployment issues.

Chubb

Software Engineer, Full Stack Developer

Hyderabad, India

May 2021 – Feb 2022

- Developed scalable insurance portal applications using Angular, Java Spring Boot, and REST APIs, enabling reusable onboarding workflows across APAC product lines.
- Assumed frontend ownership during a critical team transition, ensuring uninterrupted sprint delivery and contributing reusable UI components to the CRUX organization-wide component library.
- Built maintainable frontend modules and backend integrations supporting scalable digital insurance products for multiple regional deployments.
- Mentored a junior intern through onboarding, development tasks, and code reviews while collaborating across engineering teams to improve delivery efficiency.

Cognizant

Junior Software Engineer, Full Stack Developer

Chennai, India

July 2019 – May 2021

- Built full stack features for a flight management portal using Angular, Java Spring Boot, PostgreSQL, and REST APIs supporting pilot scheduling and booking workflows.
- Optimized backend batch processing pipelines by identifying performance bottlenecks and refactoring execution flows, reducing batch runtime by 83%.
- Redesigned frontend data rendering and API response contracts to eliminate over-fetching, reducing page load time from 30 seconds to under 1 second.
- Collaborated on a Google Dialogflow NLP proof of concept automating customer inquiry workflows and improving response turnaround efficiency.

EDUCATION

State University of New York at New Paltz

Master of Science in Computer Science — GPA: 3.93/4

New Paltz, NY

Jan 2025 – May 2026

Thiagarajar College of Engineering

Bachelor of Technology in Information Technology — GPA: 3.26/4

Tamil Nadu, India

July 2015 – April 2019
